## Project-#1

- **Project Name**-CRM Application
- **Team size**- 12
- **Role**- Team Member
- **Duration**- 90 days
- **Environment**- Python, Django, MySQL, GIT, AWS, VS-code
- **Project Links**-<https://django-crm-app.onrender.com>

## Project-#2

- **Project Name**-CRM Application
- **Team size**- 12
- **Role**- Team Member
- **Duration**- 2 month
- **Environment**- Python, Django, HTML/CSS, Javascript ,MySQL, GIT, AWS, VS-code

### Description:

Building a CRM application using Django and Python provides a robust platform for businesses to manage customer relationships effectively, streamline operations, and improve customer satisfaction. The application's features and flexibility make it a valuable tool for sales, marketing, and customer support teams.

### Project Purpose:

The main purpose of this project is to develop a CRM application that enables businesses to effectively manage their customer relationships. The application will provide features for storing customer information, tracking interactions, managing leads and opportunities, and facilitating better communication with customer

### Description:

We've developed an e- commerce website using Django and Python, offering users a secure and user-friendly platform for online shopping. It features product listings, user accounts, secure transactions, order management, and customer support. With a scalable architecture and data analytics, it aims to enhance the online shopping experience while ensuring data security

### Project Purpose:

The Purpose of the E- commerce Website The primary purpose of your e-commerce website is to facilitate online product sales. Here are the key objectives.:  
Online Shopping: Provide users with a platform to browse, search for, and purchase products conveniently from the comfort of their homes.

User Accounts: Allow users to create accounts, store shipping information, view order history, and track their orders

Product Listings: Display product listings with descriptions, images, prices, and availability information.

Secure Transactions: Ensure secure transactions by implementing payment gateways and SSL encryption.

Order Management: Enable sellers to manage product listings, process orders, and update inventory.

Scalability: Build a scalable architecture to accommodate growing numbers of users and products.
